Dear

We have thoroughly investigated the requirements of the occupational safety and health administration 29CFR part 1910.1200 (Hazard Communication). This involved numerous meetings and seminars, including both industry and government agency representatives. As a result of these efforts, we have determined that our vulcanized products (calendered sheets, extrusions, and molded parts) are considered "articles". A material safety data sheet is not required for items meeting the "article" category.

If you have occasion to procure unvulcanized (uncured) materials from us, we are obligated to furnish an MSDS for this uncured product and we are prepared to do so.

Sincerely,

MARTIN PEREZ
TECHNICAL DIRECTOR
